Identity Management Principles

State Library of Queensland collects data to enable access to collections and services. The principles in this document underpin the use and management of identity data collected from members of the public and supports the requirements identified in the Information Privacy Act 2009. These principles foster a whole of organisation approach to identity management and provide high level guidance to manage our data assets and to balance the rights of individuals with legislative and contractual obligations.

These principles provide a user-centric focus to service provision. This focus puts the client first by reducing barriers to registration, authentication and access, enabling personalised experiences and empowering clients to self-manage their personal information and needs regardless of how and where they access State Library.

The principles also support a standards-based approach to identity management which will enable implementation of new and existing technologies and methodologies, such as Open ID and Security Assertion Markup Language (SAML).

2. Principles statement

a) Asset: Identity data is a core business asset to State Library of Queensland and is managed accordingly

Rationale: Identity data enables State Library to provide access to collections, services and facilities and to communicate with our members. Data is managed carefully to maximise its benefit to members and the organisation.

This means-
- Staff are educated and aware of the value of identity data.
- Staff with responsibility for systems which use or access identity data have the authority and means to access and manage the data for which they are accountable.
- Policy and procedures are used to ensure data quality, to reduce staff effort and waste and to enhance members’ experiences.
- Data stewards/owners are identified at the Executive Director/Director level and are accountable for creation, quality and retention/disposal of identity data in compliant systems.

b) Trustworthy: Identity data is accurate, relevant, timely, accessible and secure

*Rationale:* State Library collects the minimum level of data to deliver services and access to collections. Identity data is managed in an ethical and accountable manner throughout its lifecycle.

This means-
- Identity data is complete and captured “right first time”.
- Identity data is relevant, collected for a purpose and to meet specific business requirements and outcomes.
- The minimum level of data required is collected to enable access to services and collections.
- Identity data is managed through its complete lifecycle from registration, activation, maintenance, deactivation and deletion.
- Confidentiality, privacy and security considerations underlie all decisions and are balanced against the right to information.
- State Library maintains a central authoritative store for identity data but copies of data may be stored in other locations as required including cloud-hosted services. The possible use of external locations is identified at the registration process.
- Retention and disposal of identity data is managed appropriately and in a timely manner.

c) Shared: Identity data is securely shared across State Library of Queensland and derived from a single authoritative source

*Rationale:* Timely access to identity data is essential to improve the quality and efficiency of both members’ experiences and staff’s activities. Shared data will enable efficiency and cost savings and permit seamless identity access to all services.

This means-
- State Library maintains a central authoritative store for identity data but copies of data may be stored in other locations as required including in cloud-hosted services.
- Members need register only once to access to collections and services. Permission and privilege levels are identified through agreed processes to enable streamlined easy access to services.
- Staff have access to the identity data necessary to perform their duties.
- To enable data sharing, a common set of procedures, standards and rules will be developed governing data management and access. This includes consistent language used in data field labels.
- Duplication of data and redundant effort is minimised.
- As legacy systems are replaced, new applications and systems must be compliant with the enterprise environment.
- Under no circumstances will the data sharing principle cause confidential information to be compromised.
- Anonymised data will be used in open data initiatives and reporting activities.
- Anonymised data will be used to enable authentication with external service providers in a federated identity environment, such as Eduroam.
d) Private: Personal information is protected in accordance with the law

Rationale: State Library collects and holds personal information about its members. Individuals have a right to privacy and State Library is responsible for ensuring that such data is responsibly and transparently collected and managed.

This means:

- State Library complies with information privacy principles in the Information Privacy Act 2009.
- Once registered members will be empowered to access and amend their own personal details online.
- Individuals may request removal of their digital footprint from State Library managed records/data repositories.
- Staff are educated and aware of compliance requirements in relation to privacy.
- Staff act ethically and with integrity in accordance with the Code of Conduct for the Queensland Public Service. In particular clause 4.4 ensuring appropriate use and disclosure of official information. Individuals have a right to privacy and to access and amend their own personal information in State Library’s possession (as per the Information Privacy Act 2009 and the Right to Information Act 2009).
